

Project Demonstration

Project team shall record a video to demonstrate the features developed and working of overall project.

Introduction and Overview:

Start the video with an introduction to the property management application and its key objectives.

Provide an overview of the features and functionalities that the project team has developed.

Demonstration of Key Features:

Walk through each key feature of the property management application, showcasing how each feature functions in real-time.

Demonstrate property listing management, tenant management, lease and contract management, and maintenance tracking.

User Interface Showcase:

Highlight the user interface design and navigation within the application, demonstrating how users can easily access and utilize different functionalities.

Integration with Third-Party APIs:

Showcase the integration of third-party APIs, such as Google Maps, Zillow, and Twilio, and demonstrate how these integrations enhance the overall user experience.

Data Security Measures:

Discuss and demonstrate the data security measures implemented within the application, emphasizing the protection of sensitive property and user data.

Performance and Scalability:

Show the application's performance and scalability by simulating a high volume of property listings, tenant interactions, and data processing tasks.

User Testimonials and Feedback:

Include testimonials from users who have tested the application, highlighting their positive feedback and experiences while using the property management features.

Conclusion and Next Steps:

Conclude the video with a summary of the project's achievements and the impact of the property management application on the Salesforce platform.

Discuss potential future enhancements and developments for the application.

Credits and Acknowledgments:

Acknowledge the contributions of the project team members and any external resources or support that facilitated the development of the property management application.
